

The exhibition shows photographs from **Ursula Meissner**, who has travelled extensively in crisis regions. Each of the perceptive photographs of women has a compelling story to tell. It is the story of women whose bodies, souls, and rights have been violated.

Women all over the world confront sexualised violence in times of war and crises. The mission of medica mondiale is to support women who have survived this violation of human rights. With the photo exhibition "Women and War", we want to ensure that these women and their lives will not be forgotten.
